Topology Optimization For Additive Manufacturing

Topology optimisation pushes the boundaries of design freedom even further, offering a range of benefits and opportunities for additive manufacturing in the most demanding industries. Additionally, with topology optimisation tools enables the ability to maximise thickness in the areas that need it most, as well as reduce the mass of a part by removing the material in areas that are not exposed to boundary loads.

Topology Optimization. The distinctive organic looking parts that many consider a trademark additive manufacturing (AM) aesthetic, are created through a process called topology optimization. Altair OptiStruct® is the original topology optimization structural design tool.

Additive Manufacturing (AM) and Topology Optimization | Altair

Additive manufacturing (AM) offers exciting opportunities to manufacturer parts of unprecedented complexity. Topology optimization is essential to fully exploit this capability. However, AM processes have specific limitations as well. When these are not considered during design optimization, modifications are generally needed in post-processing, which add costs and reduce the optimized performance.
